Whitewater River RIB

tested on the mighty Colorado River

Presenting the new 19-foot Whitewater River RIB from Williams Whitewater Marine. A RIB (rigid inflatable boat) has a rigid aluminum hull to which an inflatable tube or flotation collar is attached along the top of the gunwale. The integration of materials produces a boat that is virtually unsinkable, extremely buoyant and stable, allowing navigation in rough weather with confidence. This type of boat is the clear choice of the US Coast Guard, the US Navy and many other rescue organizations around the world. Williams Whitewater Marine has developed the first whitewater river versions of these capable boats.

The 19-foot Whitewater RIB is built to withstand the most demanding conditions. For over 10 years, its design has been tested and refined in the notorious rapids of Cataract Canyon on the Colorado River. Water levels there vary tremendously, from high flood stage water to low rocky water. This unusual mix has provided the ideal conditions for designing a boat that can survive a boulder hit one week and a full swamping the next. The highly effective scupper system can drain a boat full of water in less than 30 seconds without the use of auxiliary bilge pumps. The boat's marine grade aluminum hull can take the rock impacts that occur on shallow rivers and during hazardous rescue conditions.

Features

- All-welded marine grade aluminum hull construction.
- 26 deck anchored "D-ring tie downs" in standard or custom configuration.
- 26 tube mounted D-ring tie downs in standard or custom configuration.
- 2 high volume self bailing scuppers.
- Non-skid "five bar" deck.
- 24" tubes with full length rubbing strake, five separate air compartments.
- 1 twin bow ring and two stern rings.
- Sealed hull compartment.

RIB Specifications

length	19'0" overall	
	15'6" inside	
beam.....	7'9" overall	
	3'10" inside	
weight	728 lbs	330.2kg
tube diameter ...	24"	.61m
